

# Day 08

---

## Kick-off

### T5 - Networks and Systems Admin. Seminar

---

T-NSA-500

# What is scripting ?

---

A scripting language or script language is a programming language that is used to manipulate, customize, and automate the facilities of an existing system.

Scripting languages are usually interpreted at runtime rather than compiled.

# BASH scripting

---

A Bash script is a plain text file which contains a series of commands.

These commands are a mixture of commands we would normally type ourselves on the command line, such as *ls* or *cp* for instance, and commands we could type on the command line but generally would not.
